Solve for x.

1) $3 - 2x = 15$

$$\ominus 2x + 3 = 15$$

$-3 \quad -3$

$$\frac{-2x}{-2} = \frac{12}{-2}$$

$$x = -6$$

Simplify.

2) $-2(3x - 4) + 2$

$$-6x + 8 + 2$$

$$-6x + 10$$
